PROFILE SUMMARY

I am a SOC Analyst specializing in threat detection, incident response, and security monitoring. I investigate security incidents, identify attack vectors, and deliver actionable intelligence to reduce dwell time and strengthen defenses.

My approach bridges offensive and defensive security combining threat hunting, root cause analysis, and red teaming techniques to proactively identify vulnerabilities and enhance detection capabilities. With expertise in network administration and ethical hacking, I leverage attacker perspectives to optimize SOC efficiency and improve incident response.

WORK EXPERIENCE

Security Analyst | Felicity IDC Limited *OCTOBER 2025 – PRESENT*

- Monitor, detect, and respond to security incidents as part of the SOC team.
- Utilize cybersecurity knowledge and tools to safeguard client systems and proprietary data.
- Collaborate with cross-functional teams to maintain security operations and support business objectives.
- Ensure confidentiality and adherence to non-disclosure agreements in handling sensitive information.
- Gain hands-on experience in real-time threat analysis, incident management, and SOC workflows.
- Report directly to the Assistant General Manager, contributing to SOC development and operational excellence.

Cyber Security Intern | Decodes Lab LTD. *AUGUST 2024 - NOVEMBER 2024*

My cybersecurity internship at Decodes Lab assisted me in building a foundation in critical areas of cybersecurity. I participated in multiple projects with the cybersecurity unit which furthered my understanding of practical IT security core concepts and processes.

- Conducted network security examinations to detect and pinpoint vulnerabilities and threats in organizational systems.
- Conducted risk assessments based on system architecture examination, threat landscape exploration, and possible mitigation options.
- Helped in vulnerability assessments by performing scanning, analysis, and reporting on loopholes in security.
- Collaborated towards the implementation of security procedures and policies for the cyber defense to improve documentation as well as overall cyber defense.
- Achieved practical understanding of various cybersecurity tools and frameworks through hands-on exercises and workshops.

ICT Coordinator | ICT Ministry of Bangladesh – Kaliakair Upazila *MARCH 2023 - SEPTEMBER 2023*

- Executed and facilitated multiple technology-driven initiatives supporting regional digital development and e-governance.
- Managed and maintained the ICT infrastructure for the Kaliakair Upazila administration, ensuring system reliability and efficiency.
- Delivered technical support, troubleshooting, and strategic guidance to enhance IT operations across departments.
- Conducted ICT training sessions to upskill government staff and promote digital literacy within public services.

EDUCATION

B.Sc. in Computer Science and Engineering (CSE) *2020 - Running*

- Gono Bishwabidyalay

Higher Secondary Certificate (HSC) *2020*

- Gazipur Zila College
- Group: Science
- Result: GPA 4.83

PROJECTS

Breach Email Detector

- Role: Developer & Security Researcher
- Tech Stack: Python, Pandas, Matplotlib, LeakCheckAPI

Developed an advanced Python-based email breach detection and reporting tool for SOC environments, enabling automated threat intelligence gathering and credential exposure assessment.

- Developed automated bulk email breach detection tool processing 5000+ emails per scan with threat intelligence correlation
- Implemented multi-format reporting (PDF/DOCX/CSV/HTML) with data visualization for SOC breach analysis workflows
- Engineered GUI dashboard with pause/resume controls and real-time progress tracking for operational efficiency.

Phishing Awareness Portal

- Role: Cybersecurity Analyst & Developer
- Tech Stack: HTML, CSS, JavaScript

A hacker-themed responsive web app to educate users on phishing attacks.
Includes a phishing quiz, scam URL checker, and email legitimacy validator.
Features Matrix-style animation and works across all device sizes.
Clean, beginner-friendly codebase ideal for awareness and learning.

Penetration Testing Project on Metasploitable2

- Performed full-scope penetration testing on Metasploitable2 VM using Kali Linux, covering reconnaissance, exploitation, privilege escalation, and reporting.
- Exploited vsftpd, Samba, and DistCC vulnerabilities using Metasploit Framework.
- Achieved root access via SUID misconfiguration and Nmap interactive shell.
- Created a detailed penetration testing report.
- Tools used: Nmap, Nikto, Enum4Linux, Metasploit.

SKILL

Vulnerability Assessment ★★★☆☆	Operating Systems ★★★☆☆	Penetration Testing ★★★☆☆
Python ★★★☆☆	Java Script ★★★★☆	HTML & CSS ★★★★½
Threat Detection & Analysis ★★★☆☆	Security Monitoring & Incident Response ★★★☆☆	Vulnerability Scanning ★★★☆☆
Bash Scripting ★★☆☆☆	Cybersecurity ★★★☆☆	MongoDB ★★☆☆☆
Express ★★☆☆☆	React ★★★☆☆	Node.js ★★☆☆☆
SIEM ★★★☆☆	Network & System Security ★★★☆☆	SOC Operations Management ★★☆☆☆

COURSES

Professional Cybersecurity Fundamentals *2025 - 2026*
- SecurityMindPro

Cyber Security & Ethical Hacking *2025*
- Arena Web Security

Certified Ethical Hacking (CEH) *2024*
- Decodes Lab Limited

Threat & Vulnerability Management *2023*
- Codex71

Full Stack Web Developmentt (MERN) *2023*
- Ostad

Office Application Program *2016*
- Youth Development Computer Training Institute
