PROFILE SUMMARY

I am a SOC Analyst specializing in threat detection, incident response, and security monitoring. I investigate security incidents, identify attack vectors, and deliver actionable intelligence to reduce dwell time and strengthen defenses.
My approach bridges offensive and defensive security combining threat hunting, root cause analysis, and red teaming techniques to proactively identify vulnerabilities and enhance detection capabilities. With expertise in network administration and ethical hacking, I leverage attacker perspectives to optimize SOC efficiency and improve incident response.

WORK EXPERIENCE

Security Analyst | Felicity IDC Limited *OCTOBER 2025 – PRESENT*

- Monitor, detect, and respond to security incidents as part of the SOC team.
- Utilize cybersecurity knowledge and tools to safeguard client systems and proprietary data.
- Collaborate with cross-functional teams to maintain security operations and support business objectives.
- Ensure confidentiality and adherence to non-disclosure agreements in handling sensitive information.
- Gain hands-on experience in real-time threat analysis, incident management, and SOC workflows.
- Report directly to the Assistant General Manager, contributing to SOC development and operational excellence.

Cyber Security Intern | Decodes Lab LTD. *AUGUST 2024 - NOVEMBER 2024*

My cybersecurity internship at Decodes Lab assisted me in building a foundation in critical areas of cybersecurity. I participated in multiple projects with the cybersecurity unit which furthered my understanding of practical IT security core concepts and processes.

- Conducted network security examinations to detect and pinpoint vulnerabilities and threats in organizational systems.
- Conducted risk assessments based on system architecture examination, threat landscape exploration, and possible mitigation options.
- Helped in vulnerability assessments by performing scanning, analysis, and reporting on loopholes in security.
- Collaborated towards the implementation of security procedures and policies for the cyber defense to improve documentation as well as overall cyber defense.
- Achieved practical understanding of various cybersecurity tools and frameworks through hands-on exercises and workshops.

ICT Coordinator | ICT Ministry of Bangladesh – Kaliakair Upazila *MARCH 2023 - SEPTEMBER 2023*

- Executed and facilitated multiple technology-driven initiatives supporting regional digital development and e-governance.
- Managed and maintained the ICT infrastructure for the Kaliakair Upazila administration, ensuring system reliability and efficiency.
- Delivered technical support, troubleshooting, and strategic guidance to enhance IT operations across departments.
- Conducted ICT training sessions to upskill government staff and promote digital literacy within public services.

EDUCATION

B.Sc. in Computer Science and Engineering (CSE) *2020 - Running*

- Gono Bishwabidyalay

Higher Secondary Certificate (HSC) *2020*

- Gazipur Zila College
- Group: Science
- Result: GPA 4.83

PROJECTS

Bulk Email Breach Scanner

- Role: Developer & Security Researcher
- Tech Stack: Python, Pandas, Matplotlib, LeakCheckAPI

Developed an advanced Python-based email breach detection and reporting tool for SOC environments, enabling automated threat intelligence gathering and credential exposure assessment.

- Developed automated bulk email breach detection tool processing 5000+ emails per scan with threat intelligence correlation
- Implemented multi-format reporting (PDF/DOCX/CSV/HTML) with data visualization for SOC breach analysis workflows
- Engineered GUI dashboard with pause/resume controls and real-time progress tracking for operational efficiency.

Advanced Vulnerability Scanner & Assessment Tool

- Role: Developer & Security Researcher
- Tech Stack: Python, Socket Programming, Threading (ThreadPoolExecutor), NVD API (nvdlib), Wappalyzer, SSL/TLS, Tkinter, Requests, JSON/HTML
- Developed a Python-based network vulnerability assessment tool for SOC and Purple Team operations, combining multi-threaded port scanning, banner grabbing, and service fingerprinting for 65,535 ports.
- Implemented automated CVE correlation using NVD-backed lookups and web technology detection (e.g., Wappalyzer) to identify vulnerable services and web stacks with version-aware insight.
- Built severity-based HTML/JSON reporting with enriched vulnerability details to support remediation workflows, security auditing, and attack surface mapping.
- Engineered an interactive GUI dashboard with real-time progress, phased scan status, and export features, optimizing analyst efficiency during offensive and defensive security assessments.

Phishing Awareness Portal

- Role: Cybersecurity Analyst & Developer
- Tech Stack: HTML, CSS, JavaScript

A hacker-themed responsive web app to educate users on phishing attacks.
Includes a phishing quiz, scam URL checker, and email legitimacy validator.
Features Matrix-style animation and works across all device sizes.
Clean, beginner-friendly codebase ideal for awareness and learning.

Penetration Testing Project on Metasploitable2

- Performed full-scope penetration testing on Metasploitable2 VM using Kali Linux, covering reconnaissance, exploitation, privilege escalation, and reporting.
- Exploited vsftpd, Samba, and DistCC vulnerabilities using Metasploit Framework.
- Achieved root access via SUID misconfiguration and Nmap interactive shell.
- Created a detailed penetration testing report.
- Tools used: Nmap, Nikto, Enum4Linux, Metasploit.

SKILLS & TOOLS

Security Operations & Threat Management

- Core Areas: SIEM, Vulnerability Management, Incident Response
- Tools & Technologies: Log Analysis, Elasticsearch, Sigma Rules, Wazuh, Stellar Cyber, Vulners Agent, OpenXDR
- Focus Areas: Security automation, detection engineering, and hands-on practice in threat analysis and response.

Operating Systems & Virtualization

- Tools & Platforms: VMware, VirtualBox, Kali Linux, Ubuntu, Windows, Parrot OS
- Focus Areas: Virtual environment management, multi-OS configuration, and hands-on skill development through practical labs and simulations.

Web Application Penetration Testing

- Tools & Frameworks: Nikto, Metasploit, Nmap, Burp Suite, OWASP ZAP
- Focus Areas: Practical exploitation, and continuous skill development through real-world scenario testing.

Programming & Scripting Languages

- Languages & Technologies: Python, JavaScript, C++, Bash, PowerShell, HTML, CSS, React.js, Express.js, Node.js
- Focus Areas: Automation scripting, web development, object-oriented programming (OOP), and problem-solving through custom tool and solution development.

Other Security Tools & Techniques

- Tools: John the Ripper, Hashcat, PyCrypto module, Stegosuite
- Focus Areas: Cryptography, steganography, open-source intelligence (OSINT), Capture the Flag (CTF) challenges, and continuous skill enhancement through practical exercises.

Productivity & Office Tools

- MS Word, Excel, PowerPoint, Google Drive, Google Docs, Google Sheets, Google Slides, Notion, OneDrive, Outlook

Hardware & Networking

- PC troubleshooting, router configuration, LAN setup, TCP/IP, VPN configuration, Cisco Packet Tracer for network simulation and practice.
